DETAILED OFFICE ACTION

1. This communication is responsive to the application filed on September 12, 2003. Claims 1-20 are presented for examination.

References in applicant's IDS form 1449 have been considered.

Claim Rejections - 35 USC §102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.
- 3. Claims 1-20, are rejected under 35 U.S.C. 102(e) as being anticipated by McBride U.S. Patent Publication No. 20030151619 A1.
- 4. As to claim 1, McBride teaches a method for analyzing a network, comprising:

 processing a data trace captured from the network to determine a network topology (refer to paragraph 203);

processing the data trace to determine errors in network conversation (refer to paragraph 203-204);

processing the data trace to determine at least one metric for the network conversation (refer to paragraph 204);

Art Unit: 2155

displaying an interface screen to the user, the interface screen comprising a graphical topology representation, a determined error representation, and a representation of at least one determined metric (refer to paragraph 204).

- 5. As to claim 2, McBride teaches the method of claim 1, wherein displaying further comprises providing a link in the interface screen wherein a user may select devices in the determined network topology and link to a second display to view errors corresponding to the selected devices (refer to Fig. 11).
- 6. As to claim 3, McBride teaches the method of claim 1, wherein displaying further comprises:

allowing a user to select an analysis duration within the data trace in the interface screen (refer to paragraph 232);

processing the trace data for the selected analysis duration to determine a state of each device in the network topology for a predetermined number of intervals in the analysis duration (refer to paragraph 231-232); and

displaying at least one error and at least one metric for the analysis duration (refer to paragraph 232).

7. As to claim 4, McBride teaches the method of claim 1, wherein displaying the determined error representation further comprises linking to a detailed error description in a second display when the user selects a particular error (refer to Fig. 11).

Art Unit: 2155

- 8. As to claim 5, McBride teaches the method of claim 1, wherein displaying the determined error representation further comprises highlighting a portion of a metric graph that corresponds to a particular error when a user selects the particular error (refer to paragraph 231-232).
- 9. Claims 6-20 do not teach or define any new limitation above claims 1-5; therefore, they are rejected for similar reasons.
- 10. Examiner has cited particular columns and line numbers in the references as applied to the claims above for the convenience of the applicant. Although the specified citations are representative of the teachings of the art and are applied to the specific limitations within the individual claim, other passages and figures may apply as well. It is respectfully requested from the applicant in preparing responses, to fully consider the references in its entirety as potentially teaching of all or part of the claimed invention, as well as the context of the passage as taught by the prior art or disclosed by the examiner.
